ABOUT

My name is Alexandr and I am a Full Stack web developer with an overall experience of about 5 years.
I am in love with my job and I am hungry for new skills and technologies. I like to work on interesting projects and meet interesting people. Workaholic and perfectionist.

I have a lot of experience with *PHP* (mostly *Yii2*), as well as client *JS*. Recently, I love using *Vue2 (Nuxt SSR)* and a *microservice architecture* pattern with *queues* in my projects. For the database, I use both *PostgreSQL* (primarily) and *MySQL*. There is also experience with *Swift* as an *iOS* app (it is in the App Store).

I fully understand how a modern web works and how to make a web application not only fast but also convenient. I love UNIX-based systems and have plenty of experience with *Debian* and *MacOS*. SOLID, DRY, KISS it's not only a set of letters for me.

…everything that can be automated should be automated.
